

A **watershed** is an area of land in which all rain, melted snow and ice, and small tributaries drain into a common body of water such as a creek, river or lake.

For example, the Columbia Basin, or **watershed**, is the large land base where all the water that falls as precipitation will eventually drain from, through a system of lakes, rivers, streams, reservoirs and glaciers, into the Columbia River. This water will eventually flow into the Pacific Ocean.

The main sources of water for the Village of Salmo are two wells located on Sayward Ave. and Glendale Ave. These two wells are located in the Lower Arrow Lakes Watershed and the Salmo River Aquifer, which contains all the land, rivers and streams that drain into the Lower Columbia River in BC.
